

A system and method is disclosed for receiving, processing and displaying a collection of financial asset price data for analysis and making of a trading decision by an investor. The system includes a programmable computer having a central processing unit (CPU); a communication device linked to said computer; a display connected to said computer; and a software program for providing a set of instructions to said computer on how to receive and process said collection of price data and how to exhibit a plurality of price charts on said display. The method comprises the steps of receiving a collection of financial asset price data from an external data source through said communication device; inputting said received collection of asset price data to said computer; processing said collection of asset price data in said central processing unit; and showing on said display a plurality of enhanced price charts derived from said processing step.
